Highly Encrypted Online Faxing for Enterprises
— and the Top Choice of Heavily Regulated Businesses

When the confidentiality and security of your data is a must, trust the cloud fax portfolio used by 12 million businesses worldwide, including more UK enterprises than any other.

eFax Secure™, available as a complement to our enterprise-level eFax Corporate® solution for business faxing, is the ideal solution to protect your sensitive and confidential faxes. eFax Secure offers an email-driven and convenient process for receiving faxes securely over the web. We also help keep your business in compliance with the Data Protection Act, NHS, and other UK regulations.

We meet strict information governance standards and have been assessed through the IG Toolkit Assessment for NHS.

Our encryption, security and backup technology enables us to help you comply with data protection regulations.

eFax Corporate is an approved **G-Cloud** service provider to public sector organisations.

The world's most experienced provider of secure cloud faxing.
Securely faxing hundreds of billions of business fax pages since 2000.

Highest Encryption Levels
256-bit AES and TLS encryption protect your inbound faxes immediately.

Tier-III Secure Servers
Servers in highly secure data centres keep your faxes protected 24/7/365.

Transport Layer Security (TLS)
Secure channel opened and a PIN required when you access your fax online.

How eFax Secure Works

When you receive a fax through your eFax Secure account, the service automatically and immediately encrypts the fax — using 256-bit encryption — and stores it securely in your eFax account online while notifying you (via email) that the fax is available.

Included in this email notification is a URL. When you click on the link, a Transport Layer Security (TLS) connection is made and you will be prompted for your eFax Secure credentials (login ID and PIN) to view the fax. eFax Corporate has upgraded from SSL encryption to the newer and even more secure TLS encryption protocol.

No sensitive information is ever directly transmitted, as the fax remains on our server – you view it from there. Additionally, the fax can remain encrypted and securely stored as long as you need it, reducing strain on your local email servers and storage devices.

The Most Robust, Reliable Cloud Faxing Solution

Automatic 256-bit encryption of inbound faxes

Protection Act and other regulations

Access to hosted faxes controlled by password

TLS-encrypted login link to access stored faxes

Storage and audit trail of your faxes, secured with AES 256-bit encryption on the cloud

Secure servers in multiple data centres rated Tier-III or higher
(for N+1 redundancy) offer 99.98% availability

HSCIC and NHS compliance enablement
